Task 3 report write-up (150–200 words) focusing on your HackerRank activity and Google Form collaboration exercise. You can paste this directly into your Project_Report.pdf under Task 3:

Task 3 – Coding & Collaboration Platforms

For the coding practice part of this task, I created an account on **HackerRank** and completed the beginner challenge "Solve Me First." This exercise helped me understand how coding platforms provide structured problems, instant feedback, and badges that motivate consistent practice. Solving the challenge gave me confidence in applying basic programming logic and showed how these platforms can be used to gradually build problem-solving skills.

For the collaboration component, I designed a **Google Form quiz** with five questions on digital literacy, including multiple choice and short answer formats. The linked Google Sheet automatically collected responses, which demonstrated how cloud tools make teamwork more efficient. Instead of exchanging files, all data was stored in one place and updated in real time.

Together, these tasks highlighted two important aspects of digital learning: individual skill development through coding practice, and collective learning through collaboration tools. HackerRank will help me strengthen my technical abilities, while Google Workspace will support group projects and peer engagement. I realized that both platforms are essential for academic growth, as they combine personal improvement with shared responsibility in digital environments.

✨ Shruti, this is ready to paste into your report. Next, do you want me to draft the **Task 4 report write-up** (100–150 words)
