One-Page Visual Content: “Digital Literacy Essentials”

Title: ***Digital Literacy: Skills for the Digital World***

1. What is Digital Literacy?

Ability to use technology, the internet, and digital tools safely and effectively.

2. Key Skills

- Searching and evaluating information
- Online communication (email, social media)
- Creating digital content
- Basic technical skills

3. Online Safety

- Use strong passwords & 2FA
- Never share OTP or UPI PIN
- Avoid suspicious links

4. Digital Responsibility

- Don’t spread fake news
- Respect others online
- Follow ethical practices

5. Common Threats

- Phishing scams

- UPI fraud
- Malware & viruses

6. Smart Practices

- Check sources before trusting
- Keep apps updated
- Use secure networks

Footer Idea:
"Be Smart • Be Safe • Be Digitally Literate"

Reflection (150–200 words)

Creating this digital literacy visual helped me understand how important it is to use technology not just efficiently, but responsibly. What stood out to me most is that digital literacy is not only about technical skills—it also includes critical thinking and online safety. Many people, including myself at times, tend to trust information online without verifying its source, which can lead to falling for fake news or scams.

I also realized how common cyber threats like phishing and UPI fraud have become, and how easily someone can be targeted if they are not careful. Learning about simple precautions, such as not sharing OTPs or avoiding unknown links, made me more aware of my own online behavior.

One key takeaway for me is the importance of staying alert and informed. Going forward, I will make sure to verify information before sharing it and be more cautious while making online transactions. This activity has made me more confident and responsible as a digital user.
